

Task breakdown

TALENT VAULT PROJECT

User Story 1: Registration page

Task 1.1: Define sign up page style as well as design and layout

Task 1.2: Add forms with clear indications allowing the user to enter their information such as first name, last name, email address, password, confirm password, street, city, postal code and province

Task 1.3: Develop code to validate user input and display error messages if needed (when the user inputs incorrect information and/or is missing input(s))

Task 1.4: Create users and run tests on the registration page

User Story 2: Login page

Task 2.1: Define login page style as well as design and layout

Task 2.2: Add forms with clear indications allowing the user to enter their information such as first email, password.

Task 2.3: Create a login button that'll redirect the user to the main page. If the user's information is invalid, display the proper error messages.

Task 2.4: Create users on the registration page and run tests on the login page

User Story 3: Job description

Task 3.1: Define job description page style as well as design and layout

Task 3.2: Create job listings that include salary, job type, shifts, qualifications and benefits

User Story 4: Features

Task 4.1: Create an option that lets the user subscribe to the mailing list
